Education

University of California, Santa Cruz, BS in Computer Science	Sep 2024 – Dec 2026
Las Positas Community College, AA in Mathematics & Liberal Arts	Sep 2022 – May 2024

Skills

Programming Languages: Python, Go, JavaScript, TypeScript, SQL, C++ , Java, C

Frameworks & Technologies: React, Next.js, Node.js, FastAPI, Tailwind CSS, PostgreSQL, Supabase, Neon, RabbitMQ, Docker, Kubernetes, AWS, Azure, Vercel, Git, Figma

AI Systems & LLMs: LLM Integration, Retrieval-Augmented Generation (RAG), Agentic Workflows, MCP

Languages English, Korean, Spanish(professional)

Experience

Software Engineer / AI Solutions Intern, SemiAI – CA Jul 2026 – Sep 2026

- Owned design and implementation of an internal CRM end-to-end, data model, APIs, and core workflows, shipping ahead of schedule with all requirements and stretch goals met; made architecture decisions independently and reported progress directly to leadership.
- Built backend data pipelines and supporting internal tools that automated recurring reporting workflows, cutting manual processing time by an estimated 30%+ and standardizing data handling across engineering and business teams.
- Worked directly with English- and Korean-speaking stakeholders to clarify requirements and keep delivery unblocked in a fast-moving startup environment.

Projects

Argus — <https://argus.masondrake.dev>

- Built and deployed a data collection pipeline from YouTube, Reddit, and any RSS-compatible source with keyword filtering to deliver focused, noise-reduced notifications.
- Engineered a fully containerized system (Next.js, Go, PostgreSQL) with automated RSS ingestion via RabbitMQ, delivering to Discord and internal dashboards, orchestrated with Docker and Kubernetes.
- Implemented JWT-based authentication, API calls, and concurrent request handling in a multi-threaded Go HTTP server.
- Currently used by 30+ active users.

FST: Frisbee Statistics Tracker — <https://fst-frisbee-statistics-tracker.vercel.app>

- Developed and deployed a cross-platform (mobile and desktop) frisbee statistics tracker with Supabase auth using React.js, JavaScript, and TypeScript.
- Designed data pipelines converting raw event logs into normalized datasets optimized for analytics and visualization.
- Published and used actively by 50+ users across local school and club teams.

SkyLink AI Flight Agent — <https://phonely.ai/?ref=sam>

- Built a fully functional AI voice agent on Phonely handling end-to-end flight booking over the phone, integrating a live AWS REST API for real-time flight search and booking.
- Architected a 10-block call flow including AWS API requests, a code block for dynamic flight ID mapping, and conditional SMS/email post-call confirmations.
- Implemented error handling for edge cases including invalid dates, unknown airports, unavailable routes, and live transfer to human agents.
- Integrated a RAG knowledge base for real-time airline policy Q&A during active calls.
